

POAKY, the device used for measuring will measure 5cm x 2cm x 0.6cm. It has a prominent button that starts the device and is used for pairing it to the application.

The device is secured to the foot using a three point harness. One around the second toe, also used to position the sensor accurately without any cognitive load, and a strap around the mid portion of the foot.

Device

The strap will be secured to the device separately, through the **strap holder**, thus making the device reusable by multiple patients.
